**Subject:** processor contacts

Jackie,

When we spoke last week, we talked about the possibility for connecting with crumb rubber processors in states close to DC. One of the steps the crumb rubber industry has taken to combat the negative information with scientific data, research results and in situ testing and research results is to form a coalition -- called the Rubber Recyclers Council. It includes producers and users of crumb rubber infill and has the support of the Institute of Scrap Recycling Industries, Washington, DC. This is a group you will want to talk with at the appropriate juncture in your research.

The contacts below are crumb rubber processors and manufacturer and are active leaders in the RRC. They are both open to talking with you, having you and members of your team visit their facilities and get a first hand understanding of crumb rubber processing and products and observe tire recycling industry's important economic and business contributions.
